There is much useful data on the different types of woods, their characteristics, their physical structure, properties and uses, ways in which they are cut and seasoned, the specific requirements in strength, moisture content, weight, grain, etc., for different aircraft parts, and the defects which the woodworker must watch for in the selection of wood for each job. There are equally full and specific details about the various types of glues used in woodwork and the techniques of application; about joints and laminations; and about the various types of finishes required on the wood and fabric parts of the aircraft, how they are applied, and how they are removed.
