New customers have overrun her family's coffee shop, located far from the mosquito-infested river, and Mattie's concerns of fever are all but overshadowed by dreams of growing her family's small business into a thriving enterprise. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. **Sports-Related Concussions in Youth: Improving the Science, Changing the Culture** reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. **Sports-Related Concussions in Youth** finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to **Sports-Related Concussions in Youth**, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal. **Resources in Education School Library Journal SLJ. It's 1776 and Isabel, Curzon, and Ruth have only ever known life as slaves. But now the young country of America is in turmoil—there are whisperings, then cries, of freedom from England spreading like fire, and with it is a whole new type of danger. For freedom being fought for one isn't necessarily freedom being fought for all...especially if you are a slave. But if an entire nation can seek its freedom, why can't they? As war breaks out, sides must be chosen, death is at every turn, and one question forever rings in their ears: Would you risk everything to be free? As battles rage up and down the Eastern seaboard, Isabel, Curzon, and Ruth flee, separate, fight, face unparalleled heartbreak and, just like war, they must depend on their allies—and each other—if they are to survive. Which leads to a second, harrowing question: Amidst so much pain and destruction, can they even recognize who their allies are? **The Ghost Map A Street, an Epidemic and the Hidden Power of Urban Networks.** Penguin UK In Ghost Map Steven Johnson tells the story of the terrifying cholera epidemic that engulfed London in 1854, and the two unlikely heroes - anaesthetist Doctor John Snow and affable clergyman Reverend Henry Whitehead - who defeated the disease through a combination of local

Workshop Summary** National Academies Press Public health officials and organizations around the world remain on high alert because of increasing concerns about the prospect of an influenza pandemic, which many experts believe to be inevitable. Moreover, recent problems with the availability and strain-specificity of vaccine for annual flu epidemics in some countries and the rise of pandemic strains of avian flu in disparate geographic regions have alarmed experts about the world's ability to prevent or contain a human pandemic. The workshop summary, *The Threat of Pandemic Influenza: Are We Ready?* addresses these urgent concerns. The report describes what steps the United States and other countries have taken thus far to prepare for the next outbreak of "killer flu." It also looks at gaps in readiness, including hospitals' inability to absorb a surge of patients and many nations' incapacity to monitor and detect flu outbreaks. The report points to the need for international agreements to share flu vaccine and antiviral stockpiles to ensure that the 88 percent of nations that cannot manufacture or stockpile these products have access to them. It chronicles the toll of the H5N1 strain of avian flu currently circulating among poultry in many parts of Asia, which now accounts for the culling of millions of birds and the death of at least 50 persons. And it compares the costs of preparations with the costs of illness and death that could arise during an outbreak. **Lost and Found** Townsend Press After a mysterious stranger starts following her and a threatening note is left on her desk at Bluford High School, Darcy Wills must race against time to save her missing sister. **Bibliotheca Britannica Or A General Index To British And Foreign Literature ; In Two Parts: Authors And Subjects.
