Author Nancy Pfenning organizes content around four basic processes of statistics: producing data, displaying and summarizing data, understanding probability, and using probability to perform statistical inference. Within this framework, the book progresses systematically through five basic problem situations involving values of variables (quantitative, categorical, or a blend). As a result, students learn to identify which situation applies and how to choose the correct display, summary, or inference tool or technique. As students gain proficiency in specific statistical techniques, the author also points out connections among topics and techniques. More than 1,000 real-life examples and categorized exercises support the approach, engaging students in practicing and developing a variety of skills. **Imagining Japan in Post-war East Asia Identity Politics, Schooling and Popular Culture Routledge** In the decades since her defeat in the Second World War, Japan has continued to loom large in the national imagination of many of her East Asian neighbours. While for many, Japan still conjures up images of rampant military brutality, at different times and in different communities, alternative images of the Japanese 'Other' have vied for predominance – in ways that remain poorly understood, not least within Japan itself. *Imagining Japan in Postwar East Asia* analyses the portrayal of Japan in the societies of East and Southeast Asia, and asks how and why this has changed in recent decades, and what these changing images of Japan reveal about the ways in which these societies construct their own identities. It examines the role played by an imagined 'Japan' in the construction of national selves across the East Asian region, as mediated through a broad range of media ranging from school curricula and textbooks to film, television, literature and comics. Commencing with an extensive thematic and comparative overview chapter, the volume also includes contributions focusing specifically on Chinese societies (the mainland PRC, Hong Kong and Taiwan), Korea, the Philippines, Malaysia and Singapore. These studies show how changes in the representation of Japan have been related to political, social and cultural shifts within the societies of East Asia – and in particular to the ways in which these societies have imagined or constructed their own identities. Bringing together contributors working in the fields of education, anthropology, history, sociology, political science and media studies, this interdisciplinary volume will be of interest to all students and scholars concerned with issues of identity, politics and culture in the societies of East Asia, and to those seeking a deeper understanding of Japan's fraught relations with its regional neighbours.

**Atoms in Electromagnetic Fields World Scientific** ' This invaluable book presents papers written during the last 40 years by Claude Cohen-Tannoudji and his collaborators on various physical effects which can be observed on atoms interacting with electromagnetic fields. It consists of a personal selection of review papers, lectures given at schools, as well as original experimental and theoretical papers. Emphasis is placed on physical mechanisms and on general approaches (such as the dressed atom approach) having a wide range of applications. Various topics are discussed, such as atoms in intense laser fields, photon correlations, quantum jumps, radiative corrections, laser cooling and trapping, Bose-Einstein condensation. In this new edition, about 200-page of new material has been added. Contents: Atoms in Weak Broadband Quasiresonant Light Fields. Lights Shifts — Linear Superpositions of Atomic Sublevels Atoms in Strong Radiofrequency Fields. The Dressed Atom Approach in the Radiofrequency Domain Atoms in Intense Resonant Laser Beams. The Dressed Atom Approach in the Optical Domain Photon Correlations and Quantum Jumps. The Radiative Cascade of the Dressed Atom Atoms in High Frequency Fields or in the Vacuum Field.
