Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles

National Academies Press The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. *Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles* estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Assessment of Fuel Economy Technologies for Light-Duty Vehicles

National Academies Press Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption—the amount of fuel consumed in a given driving distance—because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

Biomolecular Feedback Systems

Princeton University Press This book provides an accessible introduction to the principles and tools for modeling, analyzing, and synthesizing biomolecular systems. It begins with modeling tools such as reaction-rate equations, reduced-order models, stochastic models, and specific models of important core processes. It then describes in detail the control and dynamical systems tools used to analyze these models. These include tools for analyzing stability of equilibria, limit cycles, robustness, and parameter uncertainty. Modeling and analysis techniques are then applied to design examples from both natural systems and synthetic biomolecular circuits. In addition, this comprehensive book addresses the problem of modular composition of synthetic circuits, the tools for analyzing the extent of modularity, and the design techniques for ensuring modular behavior. It also looks at design trade-offs, focusing on perturbations due to noise and competition for shared cellular resources. Featuring numerous exercises and illustrations throughout, Biomolecular Feedback Systems is the ideal textbook for advanced undergraduates and graduate students. For researchers, it can also serve as a self-contained reference on the feedback control techniques that can be applied to biomolecular systems. Provides a user-friendly introduction to essential concepts, tools, and applications Covers the most commonly used modeling methods Addresses the modular design problem for biomolecular systems Uses design examples from both natural systems and synthetic circuits Solutions manual (available only to professors at press.princeton.edu) An online illustration package is available to professors at press.princeton.edu

Price Management

Strategy, Analysis, Decision, Implementation

Springer In this book, the world's foremost experts on pricing integrate theoretical rigor and practical application to present a comprehensive resource that covers all areas of the field. This volume brings together quantitative and qualitative approaches and highlights the most current innovations in theory and practice. Going beyond the traditional constraints of "price theory" and "price policy," the authors coined the term "price management" to represent a holistic approach to pricing strategy and tactical implementation. They remind us that the Ancient Romans used one word, pretium, to mean both price and value. This is the fundamental philosophy that drives successful price management where producer and customer meet. Featuring dozens of examples and case studies drawn from their extensive research, consulting, and teaching around the world, Simon and Fassnacht cover all aspects of pricing following the price management process with its four phases: strategy, analysis, decision, and implementation. Thereby, the authors take into account the nuances across industry sectors, including consumer goods, industrial products, services, and trade/distribution. In particular, they address the implications of technological advancements, such as the Internet and new measurement and sensor technologies that have led to a wealth of price management innovations, such as flat rates, freemium, pay-per-use, or pay-what-you-want. They also address the emergence of new price metrics, Big Data applications, two-sided price systems, negative prices, and the sharing economy, as well as emerging payment systems such as bitcoin. The result is a "bible" for leaders who recognize that price is not only a means to drive profit in the short term, but a tool to generate sustained growth in shareholder value over the longer term, and a primer for researchers, instructors, and students alike. Praise for Price Management "This book is truly state of the art and the most comprehensive work in price management." - Prof. Philip Kotler, Kellogg School of Management, Northwestern University "This very important book builds an outstanding bridge between science and practice." - Kasper Rorsted, CEO, Adidas "This book provides practical guidelines on value creation, communication and management, which is an imperative for businesses to survive in the coming era of uncertainty." - Dr. Chang-Gyu Hwang, Chairman and CEO, KT Corporation (Korea Telecom)

Introducing New Materials in the Automotive Industry

Linköping University Electronic Press Passenger vehicles are central to Western society, and contribute to a significant part of our greenhouse gas emissions. In order to reduce emissions, the automotive industry as a whole is working to reduce mass in passenger vehicles in order to reduce energy consumption. One way to reduce mass is to introduce lightweight materials in the body of the vehicle. This research aims to explore the relationship between product and production system when introducing new materials. Besides a theoretical review and an industry-centered technological mapping, four case studies have been conducted during the course of this licentiate thesis. Two case studies were conducted with engineering design students working as development teams, one case study with the author as the developer and finally one case study in an industrial environment at a product owning company with in-house production. The goal of the case studies has been to increase the collective knowledge of how product development decisions affect production development decisions, and vice versa, when developing passenger vehicles in new materials. In the following analysis of case study outcomes, a number of factors important for introducing new materials are discussed. The relationship between product and production is investigated, both in terms of how the production system affects the product and how the product affects the production system. The outcome from this analysis is a mapping of important factors for automotive industry companies to understand and identify when looking at introducing new materials in existing production systems. Finally, a suggestion for future research efforts is presented.

Developing Charging Infrastructure and Technologies for Electric Vehicles

IGI Global The increase in air pollution and vehicular emissions has led to the development of the renewable energy-based generation and electrification of transportation. Further, the electrification shift faces an enormous challenge due to limited driving range, long charging time, and high initial cost of deployment. Firstly, there has been a discussion on renewable energy such as how wind power and solar power can be generated by wind turbines and photovoltaics, respectively, while these are intermittent in nature. The combination of these renewable energy resources with available power generation system will make electric vehicle (EV) charging sustainable and viable after the payback period. Recently, there has also been a significant discussion focused on various EV charging types and the level of power for charging to minimize the charging time. By focusing on both sustainable and renewable energy, as well as charging infrastructures and technologies, the future for EV can be explored. Developing Charging Infrastructure and Technologies for Electric Vehicles reviews and discusses the state of the art in electric vehicle charging technologies, their applications, economic, environmental, and social impact, and integration with renewable energy. This book captures the state of the art in electric vehicle charging infrastructure deployment, their applications, architectures, and relevant technologies. In addition, this book identifies potential research directions and technologies that facilitate insights on EV charging in various charging places such as smart home charging, parking EV charging, and charging stations. This book will be essential for power system architects, mechanics, electrical engineers, practitioners, developers, practitioners, researchers, academicians, and students interested in the problems and solutions to the state-of-the-art status of electric vehicles.

The Trapeze Act

Text Publishing Loretta's mother was a trapeze artist in Europe, the star of the famed Rodzirkus circus, before she walked out on her drunken husband and his debts while on tour in Australia. But a life in 1960s suburban Adelaide was always going to be difficult, even if she does land herself the most handsome young barrister of the town, and Leda's behaviour raises more than a few eyebrows. Leda's father, handsome barrister Gilbert Lord, has no interest in his past, but hidden in a wardrobe are the journals of his ivory merchant great-great-grandfather who led an expedition to Australia's desert interior to search for elephants. For Loretta, growing up in her mother's flamboyant and often outrageous shadow, life is stifling and at times brutal. But the harder she tries to separate herself from her mother, the more she longs for her attention and love—and the more she finds that the past is inextricably woven into her own life and who she is. The Trapeze Act weaves stories of the circus and the doomed ivory expedition through a novel that is at once a heartbreaking tale of the search for acceptance and a celebration of the lustre and magic of life. My mother, whose name was Leda, never

shied from telling stories about the Dutch circus pedigree from which she'd sprung. If her ancestors were revealed to be a little unhinged in the process, so be it. I am not being fey when I say some of my ancestors could fly. My middle name, Maartje, comes from Flying Maartje May, the first woman in the world to successfully complete a triple somersault to catch on the flying trapeze, a woman of such reckless grace and beauty that during an 1851 tour of the goldfields, men emerged from the mines to shower her in gold dust. Libby Angel is an Australian poet whose work has appeared in several journals. *The Trapeze Act* is her first novel. 'The brutal and tragic circus tales in *The Trapeze Act* will appeal to fans of Sara Gruen's *Water for Elephants*, while the family drama and Australian history will delight any modern literature reader.' *Books+Publishing* 'Angel's evocative prose easily captures the eras she describes, and her quirky characters...A colourful tale.' *BookMooch* 'One to pick up early this year...A complex narrative that interweaves circus tales with family heartache.' *ArtsHub* 'The Trapeze Act is not a novel about being in the circus, but about what happens after the circus...the novel follows Loretta's journey as she grapples with her parents' past and their influence on her present.' *Guardian* 'A book of whimsy and wit...It's the pure imaginative feat of *The Trapeze Act*, and Angel's joyous, clever use of language that makes it such a rollicking good read. I'm always excited when I hear a poet has made the leap to prose, because sometimes the result bends the rules of what we expect from a novel and creates something new. With *The Trapeze Act*, Angel has done just that.' *Adelaide Advertiser* 'With the release of *The Trapeze Act*, 2017 in Australian publishing is off to a great start.' *AU Review* 'Libby Angel weaves captivating stories of the circus throughout this lyrical work about acceptance and the influence of family.' *Sunday Life* 'It is an enriching story of heartbreak and a search for love and acceptance.' *Weekly Times* 'This family drama weaves circus magic, suburban malaise and tales of the Dark Continent in seamless harmony. An impressive debut.' *Qantas Magazine* 'An expertly layered, lyrical rumination on family and identity...Angel has a vivid imagination and poetic skill with language. Her prose is evocative, her strikingly original characters as bright and colourful as they are intense. *The Trapeze Act* is a compelling portrait of a highly dysfunctional but delightful family. I look forward to seeing more from this talented writer.' *Readings* 'Quixotic and unpredictable and entertaining, like a good circus act.' *ReadPlus* 'The Trapeze Act is a stunning novel—something that should come as no surprise, give that it's the debut from poet Libby Angel. Angel transitions with ease between voices, eras and writing styles, crafting a lyrically beautiful world populated with fantastic characters...A beautiful debut' *AU Review* 'The Trapeze Act weaves stories of the circus and the doomed ivory expedition through a novel that is at once a heartbreaking tale of the search for acceptance and a celebration of the lustre and magic of life.' *Better Read Than Dead* 'Libby Angel's *The Trapeze Act* proves a colourful and striking coming-of-age novel, composed with a poet's sensitivity, flair and finesse.' *Age* '[Angel's] poetry shows in her delightful prose, and turn of phrase.' *Otago Daily Times* 'The Trapeze Act tackles questions of identity and belonging through an unapologetically feminist lens...The most evocative moments of the novel take place within Leda's circus tales of tragedy, imbuing the story with both a sense of abandon and melancholy, as well as the family dynamics that play out within a discombobulated household quite unlike any other.' *Big Issue* 'This short novel captures an essence of Australia and it also examines the question of whether we create our own identity or if our generic heritage is largely responsible for who we become.' *Good Reading* 'Angel's feisty voice and eye for the idiosyncrasies of 1960s Australia mean this is bloody bonza, mate.' *North & South* 'A well-written and entertaining debut...It is a pleasure to read Angel's poetic prose.' *Australian Book Review* 'If it sounds fabulously convoluted, that's because it is—but first-time author-poet Libby Angel expertly shifts between the various story arcs. Of course, it all starts to go horribly wrong, leaving Loretta to find her own way. But Angel's feisty voice and eye for the idiosyncrasies of 1960s Australia mean this is bloody bonza, mate.' *North & South*

Urbanization Without Cities

The Rise and Decline of Citizenship

Black Rose Books Limited The city at its best is an eco-community. Urbanization is not only a social and cultural fact of historic proportions; it is a tremendous ecological fact as well. We must explore modern urbanization and its impact on the natural environment, as well as the changes urbanization has produced in our sensibility towards society and toward the natural world. If ecological thinking is to be relevant to the modern human condition, we need a social ecology of the city.
