Optical Fiber Communications

Notion Press Optical fiber communication has indeed come a long way from the 1970s. From being a favorite subject of science fiction movies and books, today it is believable reality that finds applications in many spheres. This book explores the dominant role of optical fiber communication in the telecommunication industry, as it caters to the ever-increasing demand for high data rate transmission. It provides an overview of the history and origin of optic fiber communication and discusses the manufacturing techniques, characteristics and current applications of optic fibers. It also describes the types of fiber links in use today, the elements of optic fiber communication and the design considerations. It finally presents a brief outlook of the proposed new technologies to overcome the limitations of current optical fibers and enhance their data carrying capacity to meet the emerging demands worldwide. The book is targeted at students (as an introductory course material) and those who are not familiar with the subject and are eager to know more.

Optical Fiber Communications Systems

Theory and Practice with MATLAB® and Simulink® Models

CRC Press Carefully structured to provide practical knowledge on fundamental issues, Optical Fiber Communications Systems: Theory and Practice with MATLAB® and Simulink® Models explores advanced modulation and transmission techniques of lightwave communication systems. With coverage ranging from fundamental to modern aspects, the text presents optical communication techniques and applications, employing single mode optical fibers as the transmission medium. With MATLAB and Simulink models that illustrate methods, it supplies a deeper understanding of future development of optical systems and networks. The book begins with an overview of the development of optical fiber communications technology over the last three decades of the 20th century. It describes the optical transmitters for direct and external modulation technique and discusses the detection of optical signals under direct coherent and incoherent reception. The author also covers lumped Er:doped and distributed Raman optical amplifiers with extensive models for the amplification of signals and structuring the amplifiers on the Simulink platform. He outlines a design strategy for optically amplified transmission systems coupled with MATLAB Simulink models, including dispersion and attenuation budget methodology and simulation techniques. The book concludes with coverage of advanced modulation formats for long haul optical fiber transmission systems with accompanied Simulink models. Although many books have been written on this topic over the last two decades, most of them present only the theory and practice of devices and subsystems of the optical fiber communications systems in the fields, but do not illustrate any computer models to represent the true practical aspects of engineering practice. This book fills the need for a text that emphasizes practical computing models that shed light on the behavior and dynamics of the devices.

Convergence of Broadband, Broadcast, and Cellular Network Technologies

IGI Global In the ever-evolving telecommunication industry, technological improvements alone are not able to keep up with the significant growth of mobile broadband traffic. Optoelectronic Integrated Circuits Handbook of Terahertz Technology

Scientific e-Resources Terahertz radiation - also known as submillimeter radiation, terahertz waves, tremendously high frequency (THF), T-rays, T-waves, T-light, T-lux or THz - consists of electromagnetic waves within the ITU-designated band of frequencies from 0.3 to 3 terahertz. Wavelengths of radiation in the terahertz band correspondingly range from 1 mm to 0.1 mm. Because terahertz radiation begins at a wavelength of one millimeter and proceeds into shorter wavelengths, it is sometimes known as the submillimeter band, and its radiation as submillimeter waves, especially in astronomy. The book presents information about Terahertz science, Terahertz photodetectors and Terahertz Lasers. A special emphasis is given to room temperature operation of long wavelength photodetectors based on novel quantum dots. Moreover, a complete analysis of systems based on Quantum Cascade structures to detect far infrared wavelengths is provided. Finally, the book presents Terahertz laser principles considering multi-color lasers in this range of wavelengths. It is written as a background for graduate students in the Optics field.
