It will appeal to anyone looking for simple, effective and low-risk investing strategies. The strategies are organised by ten business sectors: Consumer Discretionary, Consumer Staples, Energy, Financials, Health Care, Industrials, Information Technology, Materials, Telecommunication Service and Utilities. For each sector a strategy is proposed for large capitalisations (companies in the S&P 500 Index) and another is given for small capitalisations (companies in the Russell 2000 index). For each sector, and each strategy, Fred Piard explains how to follow his 'lazy' approach to choose stocks by using only a couple of financial ratios. The strategies eschew detailed due diligence of companies and markets - instead they rely on applying quantitative techniques to filter out the best investments in each sector. These strategies can be managed in just a few minutes per month, making them suitable for those who only have limited time to devote to investing but still wish to have a winning return. Portfolio protection through the use of market timing and hedging is also presented and this can be used with any of the strategies. If you don't have the inclination for in-depth fundamental analysis, or only have a few spare minutes per month for your investing, try Fred Piard's lazy approach to quantitative analysis. **Proceedings of the 2nd International Conference: Quantitative and Qualitative Methodologies in the Economic and Administrative Sciences Christos Frangos** **Research Methodology and Data Analysis Second Edition UiTM Press** This book provides proper direction in doing research especially towards the understanding of research objectives, and research hypotheses. The data come from a case study of five pairs of communities in Jamaica where one community in the pair has received funds from the Jamaica social investment fund (JSIF) while the other has not - but has been picked to match the funded community in its social and economic characteristics. The qualitative data reveal that the social fund process is elite-driven and decisionmaking tends to be dominated by a small group of motivated individuals. But by the end of the project there was broad-based satisfaction with the outcome. The quantitative data from 500 households mirror these findings by showing that ex-ante the social fund does not address the expressed needs of the majority of individuals in the majority of communities. By the end of the construction process, however, 80 percent of the community expressed satisfaction with the outcome. An analysis of the determinants of participation shows that better educated and better networked individuals dominate the process. Propensity score analysis reveals that the JSIF has had a causal impact on improvements in trust and the capacity for collective action, but these gains are greater for elites within the community. Both JSIF and non-JSIF communities are more likely now to make decisions that affect their lives which indicates a broad-based effort to promote participatory development in the country, but JSIF communities do not show higher levels of community-driven decisions than non-JSIF communities. The authors shed light on the complex ways in which community-driven development works inside communities - a process that is deeply imbedded within Jamaica's sociocultural and political context. This paper - a product of the Poverty Team, Development Research Group - is part of a larger effort in the group to evaluate community-driven development. **The Sage Encyclopedia of Qualitative Research Methods: A-L ; Vol. 2, M-Z Index SAGE Publications of the National Bureau of Standards ... Energy Research Abstracts **Barron's Guide to Graduate Business Schools** **Production, Distribution and Trade Alternative Perspectives** **Routledge** This collection brings together significant new contributions to the Sraffa-based theories of production and distribution, from post-Keynesian arguments concerning monetary and macro economics to the history of thought and methodology. All of the authors are well established authorities in their field, and in this book they add stimulating and original pieces of analysis to the contemporary literature. *Production, Distribution and Trade* is divided into three parts. The first explores analytical issues in production and exchange theory, the second examines Postkeynesian Macroeconomics and the final part includes essays on the history of economic thought and methodology. This collection has been written in honour of Sergio Parrinello and is a fitting tribute to his untiring efforts to stimulate discussion among Classicists, Marxists, Postkeynesians, and Evolutionists. The book is a clear and convincing attempt to prove that an alternative paradigm to mainstream economics is alive and thriving and to argue that these perspectives shed better light on current economic problems, both as diagnosis and in terms of policy conclusions. The book will be of interest to Economics postgraduate students and researchers working in the Classical and Postkeynesian tradition.

Idea and Methods of Legal Research **Oxford University Press** Legal research examines subject matter enshrouded in social circumstances in order to conceptualize theories and prepare a future course of action. This dynamic, inter-disciplinary, and labyrinthine character of legal research requires researchers to be fluid, eclectic, and analytical in their approach. *Idea and Methods of Legal Research* unearths how the thinking process is to be streamlined in research, how a theme is built on the basis of comprehensive and intensive study, and the paths through which notions of objectivity, feminism, ethics, and purposive character of knowledge are to be understood. The book first explains the meaning, evolution, and scope of legal research, and discusses objectivity and ethics in legal research. It engages with the requirements, advantages, and limits of various doctrinal and non-doctrinal methods and tools, and the points to be considered in selecting a suitable method or combination of methods. It highlights analytical, historical, philosophical, comparative, qualitative, and quantitative methods of legal research. The book then goes on to discuss the use of multi-method legal research, policy research, action research, and feminist legal research and finally, reflects on research-based critical legal writing, as opposed to client-related legal writing. This book, thus, is a comprehensive answer to key questions one faces in legal research.
