INTRODUCTORY R: A BEGINNER'S GUIDE TO DATA VISUALISATION, STATISTICAL ANALYSIS AND PROGRAMMING IN R

Robert Knell R is now the most widely used statistical software in academic science and it is rapidly expanding into other fields such as finance. R is almost limitlessly flexible and powerful, hence its appeal, but can be very difficult for the novice user. There are no easy pull-down menus, error messages are often cryptic and simple tasks like importing your data or exporting a graph can be difficult and frustrating. Introductory R is written for the novice user who knows a little about statistics but who hasn't yet got to grips with the ways of R. This new edition is completely revised and greatly expanded with new chapters on the basics of descriptive statistics and statistical testing, considerably more information on statistics and six new chapters on programming in R. Topics covered include: A walkthrough of the basics of R's command line interface Data structures including vectors, matrices and data frames R functions and how to use them Expanding your analysis and plotting capacities with add-in R packages A set of simple rules to follow to make sure you import your data properly An introduction to the script editor and advice on workflow A detailed introduction to drawing publication-standard graphs in R How to understand the help files and how to deal with some of the most common errors that you might encounter. Basic descriptive statistics The theory behind statistical testing and how to interpret the output of statistical tests Thorough coverage of the basics of data analysis in R with chapters on using chi-squared tests, t-tests, correlation analysis,

regression, ANOVA and general linear models What the assumptions behind the analyses mean and how to test them using diagnostic plots Explanations of the summary tables produced for statistical analyses such as regression and ANOVA Writing your own functions in R Using table operations to manipulate matrices and data frames Using conditional statements and loops in R programmes. Writing longer R programmes. The techniques of statistical analysis in R are illustrated by a series of chapters where experimental and survey data are analysed. There is a strong emphasis on using real data from real scientific research, with all the problems and uncertainty that implies, rather than well-behaved made-up data that give ideal and easy to analyse results.

MUSEUM REVOLUTIONS

HOW MUSEUMS CHANGE AND ARE CHANGED

Routledge This single-volume museum studies reference title explores the ways in which museums are shaped and configured and how they themselves attempt to shape and change the world around them. Written by a leading group of museum professionals and academics from around the world and including new research, the chapters reveal the diverse and subtle means by which museums engage and in so doing change and are changed. The authors span over 200 years discussing national museums, ecomuseums, society museums, provincial galleries, colonial museums, the showman's museum, and science centres. Topics covered include: disciplinary practices, ethnic representation, postcolonial politics, economic aspiration, social reform, indigenous models, conceptions of history, urban regeneration, sustainability, sacred objects, a sense of place, globalization, identities, social responsibility, controversy, repatriation, human remains, drama, learning and education. Capturing the richness of the museum studies discipline, *Museum Revolutions* is the ideal text for museum studies courses, providing a wide range of interlinked themes and the latest thought and research from experts in the field. It is invaluable for those students and museum professionals who want to understand the past, present and future of the museum.

ECOLOGICAL SOCIETY OF AMERICA ... ANNUAL MEETING ABSTRACTS

MOBILITY AND ANCIENT SOCIETY IN ASIA AND THE AMERICAS

Springer Mobility and Ancient Society in Asia and the Americas contains contributions by leading international scholars concerning the character, timing, and geography of regional migrations that led to the dispersal of human societies from Inner and northeast Asia to the New World in the Upper Pleistocene (ca. 20,000-15,000 years ago). This volume bridges scholarly traditions from Europe, Central Asia, and North and South America, bringing different perspectives into a common view. The book presents an international overview of an ongoing discussion that is relevant to the ancient history of both Eurasia and the Americas. The content of the chapters provides both geographic and conceptual coverage of main currents in contemporary scholarly research, including case studies from Inner Asia (Kazakhstan), southwest Siberia, northeast Siberia, and North and South America. The chapters consider the trajectories, ecology, and social dynamics of ancient mobility, communication, and adaptation in both Eurasia and the Americas, using diverse methodologies of data recovery ranging from archaeology, historical linguistics, ancient DNA, human osteology, and palaeoenvironmental reconstruction. Although methodologically diverse, the chapters are each broadly synthetic in nature and present current scholarly views of when, and in which ways, societies from northeast Asia ultimately spread eastward (and southward) into North and South America, and how we might reconstruct the cultures and adaptations related to Paleolithic groups. Ultimately, this book provides a unique synthetic perspective that bridges Asia and the Americas and brings the ancient evidence from both sides of the Bering Strait into common focus.

Elsevier Health Sciences For more than 30 years, *Practical Management of Pain* has offered expert guidance to both clinicians and trainees, covering every aspect of acute and chronic pain medicine for adult and pediatric patients. The fully revised 6th Edition brings you fully up to date with new developments in patient evaluation, diagnosis of pain syndromes, rationales for management, treatment modalities, and much more. Edited by a team of renowned pain clinicians led by Dr. Honorio Benzon, this authoritative reference is a comprehensive, practical resource for pain diagnosis and treatment using a variety of pharmacologic and physical modalities. Presents a wealth of information in a clearly written, easily accessible manner, enabling you to effectively assess and draw up an optimal treatment plan for patients with acute or chronic pain. Takes a practical, multidisciplinary approach, making key concepts and techniques easier to apply to everyday practice. Shares the knowledge and expertise of global contributors on all facets of pain management, from general principles to specific management techniques. Discusses the latest, best management techniques, including joint injections, ultrasound-guided therapies, and new pharmacologic agents such as topical analgesics. Covers recent global developments regarding opioid induced hyperalgesia, neuromodulation and pain management, and identification of specific targets for molecular based pain. Includes current

information on the use of cannabinoids in pain management and related regulatory, professional, and legal considerations. Includes the latest guidelines on facet injections and safety of contrast agents. Provides new, evidence-based critical analysis on treatment modality outcomes and the latest information on chronic pain as a result of surgical interventions.
