GETTING IN, STAYING IN AND GETTING ON

DISABILITY EMPLOYMENT SUPPORT FIT FOR THE FUTURE

The Stationery Office This review, looking at disability employment support, and entitled "Getting in, staying in and getting on", seeks to ensure that disabled people have the opportunities and support needed to meet their employment aspirations. The focus of the review has set out a number of recommendations for employment support and the author has focused on three areas to promote this objective. (1) To set out the types of support that today's young disabled people will want in a future economy; (2) Enshrining the right to work objectives as set out in the UN Convention on the Rights of Persons with Disabilities; (3) To make a case for cross-Government work to unlock the big enablers of employment, that is "Getting in, staying in and getting on", which includes raising the aspirations of what disabled people can achieve. For "getting in" this should include more disabled people doing apprenticeships, work experience and work placements; for "staying in" there should be better promotion for Access to Work for retention and for "getting on" there should be greater encouragement of disabled people in setting up businesses and gaining skills for career development. The publication is divided into 5 chapters, with appendices.

POWER

ELECTRIC AND HYBRID VEHICLES

DESIGN FUNDAMENTALS

CRC Press A thoroughly revised third edition of this widely praised, bestselling textbook presents a comprehensive systems-level perspective of electric and hybrid vehicles with emphasis on technical aspects, mathematical relationships and basic design guidelines. The emerging technologies of electric vehicles require the dedication of current and future engineers, so the target audience for the book is the young professionals and students in engineering eager to learn about the area. The book is concise and clear, its mathematics are kept to a necessary minimum and it contains a well-balanced set of contents of the complex technology. Engineers of multiple disciplines can either get a broader overview or explore in depth a particular aspect of electric or hybrid vehicles. Additions in the third edition include simulation-based design analysis of electric and hybrid vehicles and their powertrain components, particularly that of traction inverters, electric machines and motor drives. The technology trends to incorporate wide bandgap power electronics and reduced rare-earth permanent magnet electric machines in the powertrain components have been highlighted. Charging stations are a critical component for the electric vehicle infrastructure, and hence, a chapter on vehicle interactions with the power grid has been added. Autonomous driving is another emerging technology, and a chapter is included describing the autonomous driving system architecture and the hardware and software needs for such systems. The platform has been set in this book for system-level simulations to develop models using various softwares used in academia and industry, such as MATLAB®/Simulink, PLECS, PSIM, Motor-CAD and Altair Flux. Examples and simulation results are provided in this edition using these software tools. The third edition is a timely revision and contribution to the field of electric vehicles that has reached recently notable markets in a more and more environmentally sensitive world.

COTTON FIBER: PHYSICS, CHEMISTRY AND BIOLOGY

Springer Cotton fiber is the most important natural fiber used in the textile industry. The physical structure and chemical compositions of cotton fibers have been extensively studied. Newer high speed spinning instruments are being deployed around the world that demand longer, stronger and finer fibers. Consequently, genetic improvement in fiber quality has been stressed. With improvement in fiber quality has come the realization that further fiber improvement will require a better understanding of fiber development and biology. As a consequence, cotton fiber developmental biology, genetics and genomics have become focal points in the cotton research community. As the longest single-celled plant hair, cotton fiber has been used as an experiment model to study trichome initiation and elongation in plants. This book provides a comprehensive update on cotton fiber physics, chemistry and biology that form the three sections of the book. In the physics section, the physical structure of cotton fiber is first illustrated in great detail. Then a suite of fiber properties and their measuring methods are described. The pros and cons of each method are outlined. New methods to measure physical properties of single fiber and young developing fibers are included. In the chemistry section, the chemical compositions of cotton fibers are described in detail. This knowledge is necessary for efficient modification of cotton fibers for better and broader utilization. The advancement in cotton fiber modification using chemical and enzymatic methods opened new ways to utilize cotton fibers. In the biology section, the book first introduces the utilization of naturally occurring color cottons. Color cottons possess unique attributes such as better fire retardant ability. Advancement in understanding fiber color genetics and biochemical pathways and new utilization of color cottons are discussed. Recent technological advancements in molecular biology and genomics have enabled us to study fiber development in great depth. Many genes and quantitative trait loci related to fiber quality attributes have been

identified and genetically mapped. Some of these genes and QTLs are being used in breeding. Progresses in cotton fiber improvement using breeding and biotechnology are discussed in the last chapter. This book serves as a reference for researchers, students, processors, and regulators who either conduct research in cotton fiber improvement or utilize cotton fibers.

LIFELONG KINDERGARTEN

CULTIVATING CREATIVITY THROUGH PROJECTS, PASSION, PEERS, AND PLAY

MIT Press How lessons from kindergarten can help everyone develop the creative thinking skills needed to thrive in today's society. In kindergartens these days, children spend more time with math worksheets and phonics flashcards than building blocks and finger paint. Kindergarten is becoming more like the rest of school. In Lifelong Kindergarten, learning expert Mitchel Resnick argues for exactly the opposite: the rest of school (even the rest of life) should be more like kindergarten. To thrive in today's fast-changing world, people of all ages must learn to think and act creatively—and the best way to do that is by focusing more on imagining, creating, playing, sharing, and reflecting, just as children do in traditional kindergartens. Drawing on experiences from more than thirty years at MIT's Media Lab, Resnick discusses new technologies and strategies for engaging young people in creative learning experiences. He tells stories of how children are programming their own games, stories, and inventions (for example, a diary security system, created by a twelve-year-old girl), and collaborating through remixing, crowdsourcing, and large-scale group projects (such as a Halloween-themed game

called Night at Dreary Castle, produced by more than twenty kids scattered around the world). By providing young people with opportunities to work on projects, based on their passions, in collaboration with peers, in a playful spirit, we can help them prepare for a world where creative thinking is more important than ever before.

ENABLING REGULATORY FRAMEWORKS FOR CONTRACT FARMING

Food & Agriculture Org. FAO's previous contribution to the development of contract farming saw the publication in 2015 of the UNIDROIT/FAO/IFAD Legal Guide on Contract Farming, which focused on the bilateral relationship between an agricultural producer and a contractor. This Legislative Study develops that research and focuses on the regulatory frameworks for contract farming, aiming to highlight different possible approaches for different contexts. Responsible contract farming can be a powerful tool for small scale farmers in developing countries to move towards larger scale commercial production. It can create economic wealth, contribute to supply chain efficiency through the production of higher quantities of better quality products, and contribute to achieving domestic food security objectives. Maximizing these benefits while minimizing the inherent risks of contract farming is reliant upon the forging of an enabling environment, a key part of which is the domestic regulatory framework. This Legislative Study provides guidance to domestic regulators and other interested readers on how to appraise and potentially reform domestic regulatory frameworks to achieve responsible contract farming. Recognising that different countries and contextual realities may benefit from different regulatory solutions, this Study provides several examples, supported by representative case studies, on how contract farming can be regulated, without promoting a single solution as the most appropriate. Please visit FAO's Contract Farming Resource Centre, <http://www.fao.org/in-action/contract-farming/en/>, which is a regularly updated website hosting a variety of material on contract farming both from FAO and from other recognized authors.
