Fish Energetics

New Perspectives

Springer Science & Business Media It is almost thirty years since Professor G. G. Winberg established the basis for experimental studies in fish energetics with the publication of his monograph, **Rate of Metabolism and Food Requirements of Fishes**. His ultimate aim was to develop a scientific approach to fish culture and management, and the immense volume of literature generated in the ensuing years has been mainly in response to the demand for information from a rapidly expanding, world-wide aquaculture industry and to the shortcomings of contemporary practices in fisheries management. The purpose of this book is not to review this literature comprehensively, but, assuming an informed readership, to focus attention on topics in which new knowledge and theory are beginning to be applied in practice. Most emphasis has been placed on food; feeding; production (growth and reproduction) and energy budgeting, as these have most influence on the development of fish culture. Some chapters offer practical advice for the selection of methods, and warn of pitfalls in previous approaches. In others the influence of new theory on the interpretation of studies in fish energetics is discussed in the context of resource allocation and adaptation. We hope that the scope of material presented here will have sufficient interest and value to help significantly to fulfil Winberg's original objectives.

Prevention of mother-to-child transmission of hepatitis B virus (HBV)

guidelines on antiviral prophylaxis in pregnancy

World Health Organization WHO estimates that in 2015, 257 million people were living with chronic hepatitis B virus (HBV) infection worldwide, and that 900 000 had died from HBV infection, mostly as a result of cirrhosis or hepatocellular carcinoma. Most HBV-associated deaths among adults are secondary to infections acquired at birth or in the first five years of life. In May 2016, the World Health Assembly endorsed the Global health sector strategy on viral hepatitis, which calls for the elimination of viral hepatitis as a public health threat by 2030 (defined as a 90% reduction in incidence of new infections and a 65% reduction in mortality). Elimination of HBV infection as a public health threat requires a reduction in the prevalence of hepatitis B surface antigen (HBsAg) to below 0.1% in children 5 years of age. This can be achieved through universal immunization of newborns against hepatitis B and other interventions to prevent mother-to-child transmission of HBV. These guidelines provide evidence-based guidance on the use of peripartum antiviral prophylaxis in HBsAg-positive pregnant women for the prevention of mother-to-child transmission of HBV.

Novel Natural Products: Therapeutic Effects in Pain, Arthritis and Gastro-intestinal Diseases

Springer In recent years there have been a number of significant developments of natural products for the treatment of rheumatic diseases, pain and gastro-intestinal ulcers and inflammation. The volume covers some of these novel developments of natural products which are of current and future interest as therapies for the above-mentioned conditions. Most available volumes cover a wide range of biological and technological aspects of natural products and their discovery, some involving synthesis and properties of chemical compounds. The difference in this volume is that the natural products have a focus on their therapeutic effects on pain, arthritic and gastrointestinal diseases. Some of the natural products covered are either at the experimental stage of development while others are well-established clinically-used products. Each has its own unique place in therapy.

Nutrient Value of Some Common Foods

Health and Welfare Canada Abstract: A reference booklet for nutritionists and nutrition educators provides tabulated data on the nutrient content of a wide variety of common foods. Information is provided on the content of water, energy, protein, carbohydrate, fat, saturated and polyunsaturated fatty acids, cholesterol, 4 minerals (Ca, Fe, Na, K), 6 vitamins (thiamin, riboflavin, niacin, folate, ascorbic acid, vitamin A), and, where available, dietary fiber. The foods are listed under various sub-food headings arranged under major food categories (milk, cheese, cream, and related products; eggs; meat, poultry, fish, shellfish, and related products; lentils, nuts, and seeds; vegetables and related products; fruits and related products; bread, cereals, and related products; combination dishes, fats and oils; sugars and sweets; and miscellaneous food items (beverages, condiments, sauces, soups)). The nutrient contents are relevant to specified food portion sizes.

Goods and Services of Marine Bivalves

Springer The aim of this open access book is to review and analyse the goods and services of bivalve shellfish. How they are defined, what determines the ecological functions that are the basis for the goods and services, what controversies in the use of goods and services exist, and what is needed for sustainable exploitation of bivalves from the perspective of the various stakeholders. The book is focused on the goods and services, and not on impacts of shellfish aquaculture on the benthic environment, or on threats like biotoxins; neither is it a shellfish culture handbook although it can be used in evaluating shellfish culture. The reviews and analysis are based on case studies that exemplify the concept, and show the strengths and weaknesses of the current applications. The multi-authored reviews cover ecological, economic and social aspects of bivalve goods and services. The book provides new insights for scientists, students, shellfish producers, policy advisors, nature conservationists and decision makers. This book is open access under the CC BY license.

Nutraceutical Proteins and Peptides in Health and Disease

CRC Press Reports of the beneficial health effects of some peptides have begun to make their way into the scientific literature. Peptides can act as immunomodulators, and have been shown to have a positive influence on calcium absorption, and on regulation of serum cholesterol. A number of peptides may also possess antimicrobial properties that enhance the body's defense mechanisms, and others may produce inhibitory effects for angiotensin-I-converting enzyme (ACE), leading to novel treatments for blood pressure conditions, heart failure, and diabetes. Modern food biotechnology may also allow for the production of highly important products for those suffering life-altering food allergies. A compendium of cutting-edge information for research scientists and clinicians *Nutraceutical Proteins and Peptides in Health and Disease* is the first book that provides comprehensive discussions on bioactive proteins and peptides in the area of nutraceutical and functional foods. It looks at protein and peptide impact on the body's absorption, defense, regulating, and nervous systems, then delves into hypo-allergenic foods and modern approaches to nutraceutical research and production. With 32 chapters written by 63 scientists working at the frontier of this revolutionizing field, it includes state-of-the-art information on-- The cholesterol-lowering capabilities of proteins and peptides Opioid-like peptides The antibodies found in milk and egg yolks Enzymes derived from traditional Asian fermented foods found useful in novel thrombolytic therapy ACE-inhibitory peptides Enzymatic treatments used to create anti-allergenic food Recent developments in proteomics that are making certain processes economically feasible, including those employed in the binding of bioactive peptides *Nutraceutical Proteins and Peptides in Health and Disease* provides a compendium of cutting-edge information that can be put to direct use in research, therapy, and production. Biochemists, nutritional scientists, food scientists, and health professionals, as well as graduate students in these fields, will find this book highly useful.

Human Rights and Comparative Foreign Policy

Manas Publications *Human Rights and Comparative Foreign Policy* is the first book in English to examine the place of human rights in the foreign policies of a wide range of states during contemporary times. The book is also unique in utilizing a common framework of analysis for all 10 of the country or regional studies covered. This framework treats foreign policy as the result of a two-level game in which both domestic and foreign factors have to be considered. Leading experts from around the world analyze both liberal democratic and other foreign policies on human rights. A general introduction and a systematic conclusion add to the coherence of the project. The authors note the increasing attention given to human rights issues in contemporary foreign policy. At the same time, they argue that most states, including liberal democratic states that identify with human rights, are reluctant most of the time to elevate human rights concerns to a level equal to that of traditional security and economic concerns. When states do seek to integrate human rights with these and other concerns, the result is usually great inconsistency in patterns of foreign policy. The book further argues that different states bring different emphases to their human rights diplomacy, because of such factors as national political culture and perceived national interests. In the last analysis states can be compared along two dimensions pertaining to human rights: extent to which they are oriented toward an international rather than national conception of rights; and extent to which they are oriented toward international rather than national action to protect human rights.

Biological Potential and Medical Use of Secondary Metabolites

MDPI Many macro and micro species, from terrestrial and aquatic environments, produce structurally unique compounds and, in many countries, still are the primary sources of medicines. In fact, secondary metabolites are an important source of chemotherapeutic agents but are also lead compounds for synthetic modification and the optimization of biological activity. Therefore, the exploitation of secondary metabolites, or their inspired synthetic compounds, offers excellent opportunities for the pharmaceutical industry. This *Medicines Special Issue* focuses on the great potential of secondary metabolites for therapeutic application. The Special Issue contains 16 articles reporting relevant experimental results, and an overview of bioactive secondary metabolites, their biological effects, and new methodologies that improve and accelerate the process of obtaining lead compounds with regard to new drug development. We would like to thank all 83 authors, from all over the world, for their valuable contributions to this Special Issue.

Cash-transfer Programming in Emergencies

Oxfam In emergencies, distributing cash in a targeted manner can often meet people's immediate needs more quickly and appropriately than the direct distribution of commodities such as food aid. Cash gives people choices and thereby preserves their dignity. Commodity distribution may pose logistical problems, takes time, and in the case of food aid, may disrupt local markets if food is actually available within the affected country or region. But among humanitarian agencies there are fears that cash transfers will pose security risks, create inflation, and fail to be used to meet basic needs. In this guide, the first of its kind, Oxfam staff members present the rationale behind cash-transfer programs, considering the arguments for and against cash as an alternative to commodity distribution. They also give guidance on when cash is the most appropriate intervention and how to assess this. Different types of cash intervention are compared--cash grants, vouchers, and cash-for-work--and the guide uses checklists to explain the practical steps involved in implementing them. They draw on the experience of Oxfam and other agencies of operating such programs, including responses to the devastation caused by the Indian Ocean tsunami in December 2004. The guidelines are primarily intended for NGO personnel: humanitarian program managers, food-security specialists, public-health engineers, finance staff, and logisticians. Policymakers in donor organizations and international agencies will also find them relevant. The sixteen cards contain key elements from the book to explain how to assess whether cash is the most appropriate response to any particular emergency. The cards and the paperback are also available as a set.

Tourism and Sustainable Economic Development

Springer For many countries tourism is an industry of great economic significance; it is seen as a main instrument for regional development, as it stimulates new economic activities. Tourism may have a positive economic impact on the balance of payments, on employment, on gross income and production, but it may also have negative effects, particularly on the environment. Questions arise as to whether it is possible to keep on developing tourism in a certain area without negative or irreversible influences on the environment. Tourism and Sustainable Economic Development provides a theoretical framework for these problems, as well as practical illustrations on the following topics: the conditions under which specialization in tourism is not harmful for economic growth; the trade-offs, if any, between tourism development and economic growth; the need for government intervention and the various policy options and instruments available to policy makers. The book comprises two parts. The first part presents general views on tourism and sustainable economic development, and some opinions on the relationship between tourism and the environment. Some of the basic concepts implicit in sustainability are examined in relation to regional development, urban tourism, art cities, and rural tourism. The second part of the book concentrates on strategies and policy instruments. The purpose is to concisely define and bring together some policies which appear to be necessary, and whose implementation is required if we are to reconcile tourism development with the protection and conservation of the environment. Some analytical tools for policy making with regard to tourism and the environment are developed. As will become clear, there are many gaps in our knowledge that need to be filled if we are to be successful in controlling tourism in a way that puts this important industry onto a sustainable development path.

Phylogenetic Perspectives on the Vertebrate Immune System

Springer Science & Business Media This book contains the proceedings of the first meeting on invertebrate immunity ever sponsored as a summer research conference by the Federation of American Societies for Experimental Biology (FASEB). The conference was held in Copper Mountain, CO from July 11-16, 1999. It was an extension of a New York Academy of Sciences meeting entitled "Primordial Immunity: Foundations for the Vertebrate Immune System" held on May 2-5, 1993 at the Marine Biological Laboratories in Woods Hole, MA. The proceedings of that meeting were published in The Annals of the New York Academy of Sciences (volume 712). At that meeting all the attendees agreed that this type of conference (a relatively small focused gathering) allowed for participation by investigators at all levels of their careers. We further agreed that we should search for a forum that would allow this meeting to continue. The FASEB Summer Research Conference was an excellent vehicle for this type of meeting. Furthermore, this year's participants decided to continue this meeting as a regularly scheduled FASEB sponsored event. This was a unique conference in the sense that it focused upon mechanisms of development and defense in protostome and deuterostome invertebrates and lower vertebrates. There was a strong emphasis on evolutionary cell biology, phylogenetic inferences and the evolution of recognition and regulatory systems.

The Microbiology of Skin, Soft Tissue, Bone and Joint Infections

Academic Press The Microbiology of Skin, Soft Tissue, Bone and Joint Infections: Volume 2 discusses modern approaches in diagnosis, treatment, and prophylaxis of skin, soft tissue, bone, and joint infections. The volume has been divided into three sections. The first section includes chapters on diagnosis, treatment, and prophylaxis of skin and soft tissue infections. It discusses antimicrobial and surgical treatment of wounds, diabetic foot, and different soft tissue infections. Ten chapters are devoted to cutaneous and musculoskeletal infections in special groups of patients, which have their own specificity, i.e. in pediatric and HIV-infected patients. Together with chapters on commonly present diseases, there are chapters which discuss interesting but not well studied pathologies (natal cleft pilonidal sinus) and pathogens (*Malassezia* and *Shewanella* spp.). The second section reviews etiology, pathogenesis, diagnosis and treatment of bone and joint infections, mainly osteomyelitis and prosthetic joint infections. Also, one chapter in this section discusses a newly emerging bacterial pathogen that causes skeletal infections, *Kingella kingae*. The third section incorporates alternative and new approaches—such as nanotechnology, ultrasound, novel delivery approaches and phyto-derived medicines—to the treatment and prophylaxis of skin, soft tissue, bone, and joint infections.
