[Council of Europe](#) The CEFR Companion volume broadens the scope of language education. The CEFR Companion volume represents another step in a process of engagement with language education that has been pursued by the Council of Europe since 1971 and which seeks to: ► promote and support the learning and teaching of modern languages; ► enhance intercultural dialogue, and thus mutual understanding, social cohesion and democracy; ► protect linguistic and cultural diversity in Europe; and ► promote the right to quality education for all.

### BILINGUAL ENGLISH-SPANISH ASSESSMENT (BESA)

---

When a young bilingual child experiences language difficulties, it can be hard to tell if those challenges are due to a disorder or just limited exposure to the English language. That's a critical distinction--because while limited language exposure will fix itself over time, a language impairment is a clinical issue that will cause the child difficulties in school without timely and effective intervention. Now there's a valid, reliable assessment that specifically responds to the needs of young Spanish-English bilingual children. For use with children ages 4 through 6 years who have varying degrees of bilingualism, the Bilingual English-Spanish Assessment (BESA) was developed to: identify phonological and/or language impairment in bilingual children and English language learners using a standardized protocol differentiate between a delay in English language acquisition and a true language disorder document children's speech and language strengths and needs monitor children's progress in both languages and use the information to make decisions about intervention How BESA Works Through a combination of subtests for students and surveys for teachers and parents, BESA reveals the big picture of a young bilingual child's language development. Comprehensive assessment with BESA includes: 3 subtests (in both English and Spanish). These three standardized- norm-referenced subtests address the key domains of morphosyntax, semantics, and phonology. The subtests are administered with children one-on-one in a quiet, well-lit, well-ventilated room free of distractions. 2 questionnaires. The SLP gathers more information by interviewing both parents and teachers. Bilingual Input-Output Survey (BIOS): determines Spanish and English use at home and school and pinpoints which language(s) need testing Inventory to Assess Language Knowledge (ITALK): identifies the parent's and teacher's perception of the child's performance in each language and highlights areas of possible concern. Pragmatic activity. This 5- to 10-minute warmup activity, in which children are asked to "help wrap a present" with the examiner, is used to establish rapport with the child and give clinicians an idea of how collaborative and interactive the child will be during the rest of the assessment. BESA Benefits Valid and reliable. There are very few assessment tools for bilingual children, and even fewer that are valid and reliable. BESA answers the call for a bilingual assessment backed up with solid evidence of validity and reliability. Culturally and linguistically appropriate. BESA subtests are different for each language; the Spanish subtest isn't just a translation of the English one. Dialects were taken into consideration--the norming sample included 17 Spanish dialects and 7 regional dialects for English--and items were developed for each language based on the markers, structure, and culture of that language. Uncovers the full picture of a child's language development. Not only does BESA identify language impairments, it also helps you gauge progress in both languages and document a child's dominant language across different domains of speech and language. This critical information will help you plan interventions and educational programming for bilingual children. Flexible and convenient. You can use each BESA component independently or combine them as part of an assessment battery. Choose which component you want to give--you're not required to administer both the English and Spanish subtests. BESA can also be given over multiple sessions, so you can easily fit it into your schedule. #### **STRENGTHENING FORENSIC SCIENCE IN THE UNITED STATES**

#### **A PATH FORWARD**

[National Academies Press](#) Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

## THE ZONES OF REGULATION

---

---

---

## A CURRICULUM DESIGNED TO FOSTER SELF-REGULATION AND EMOTIONAL CONTROL

---

"... a curriculum geared toward helping students gain skills in consciously regulating their actions, which in turn leads to increased control and problem solving abilities. Using a cognitive behavior approach, the curriculum's learning activities are designed to help students recognize when they are in different states called "zones," with each of four zones represented by a different color. In the activities, students also learn how to use strategies or tools to stay in a zone or move from one to another. Students explore calming techniques, cognitive strategies, and sensory supports so they will have a toolbox of methods to use to move between zones. To deepen students' understanding of how to self-regulate, the lessons set out to teach students these skills: how to read others' facial expressions and recognize a broader range of emotions, perspective about how others see and react to their behavior, insight into events that trigger their less regulated states, and when and how to use tools and problem solving skills. The curriculum's learning activities are presented in 18 lessons. To reinforce the concepts being taught, each lesson includes probing questions to discuss and instructions for one or more learning activities. Many lessons offer extension activities and ways to adapt the activity for individual student needs. The curriculum also includes worksheets, other handouts, and visuals to display and share. These can be photocopied from this book or printed from the accompanying CD."--Publisher's website.

## EDUCATING THE STUDENT BODY

## **TAKING PHYSICAL ACTIVITY AND PHYSICAL EDUCATION TO SCHOOL**

---

[National Academies Press](#) Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

### **EFFECTIVELY SUPPORTING OUR YOUNGEST LEARNERS**

## **MECHANISM AND CAUSALITY IN BIOLOGY AND ECONOMICS**

---

[Springer Science & Business Media](#) This volume addresses fundamental issues in the philosophy of science in the context of two most intriguing fields: biology and economics. Written by authorities and experts in the philosophy of biology and economics, Mechanism and Causality in Biology and Economics provides a structured study of the concepts of mechanism and causality in these disciplines and draws careful juxtapositions between philosophical apparatus and scientific practice. By exploring the issues that are most salient to the contemporary philosophies of biology and economics and by presenting comparative analyses, the book serves as a platform not only for gaining mutual understanding between scientists and philosophers of the life sciences and those of the social sciences, but also for sharing interdisciplinary research that combines both philosophical concepts in both fields. The book begins by defining the concepts of mechanism and causality in biology and economics, respectively. The second and third parts investigate philosophical perspectives of various causal and mechanistic issues in scientific practice in the two fields. These two sections include chapters on causal issues in the theory of evolution; experiments and scientific discovery; representation of causal relations and mechanism by models in economics. The concluding section presents interdisciplinary studies of various topics concerning extrapolation of life sciences and social sciences, including chapters on the philosophical investigation of conjoining biological and economic analyses with, respectively, demography, medicine and sociology.
