INORGANIC CHEMISTRY

[Pearson Education](#) *Inorganic Chemistry* "Catherine E. Housecroft and Alan G. Sharpe" This book has established itself as a leading textbook in the subject by offering a fresh and exciting approach to the teaching of modern inorganic chemistry. It gives a clear introduction to key principles with strong coverage of descriptive chemistry of the elements. Special selected topics chapters are included, covering inorganic kinetics and mechanism, catalysis, solid state chemistry and bioinorganic chemistry. A new full-colour text design and three-dimensional illustrations bring inorganic chemistry to life. Topic boxes have been used extensively throughout the book to relate the chemistry described in the text to

everyday life, the chemical industry, environmental issues and legislation, and natural resources. Teaching aids throughout the text have been carefully designed to help students learn effectively. The many worked examples take students through each calculation or exercise step by step, and are followed by related self-study exercises tackling similar problems with answers to help develop their confidence. In addition, end-of-chapter problems reinforce learning and develop subject knowledge and skills. Definitions boxes and end-of-chapter checklists provide excellent revision aids, while further reading suggestions, from topical articles to recent literature papers, will encourage students to explore topics in more depth. New to this edition Many more self-study exercises have been introduced throughout the book with the aim of making stronger connections between descriptive chemistry and underlying principles. Additional 'overview problems' have been added to the end-of-chapter problem sets. The descriptive chemistry has been updated, with many new results from the literature being included. Chapter 4 Bonding in polyatomic molecules, has been rewritten with greater emphasis on the use of group theory for the derivation of ligand group orbitals and orbital symmetry labels. There is more coverage of supercritical fluids and 'green' chemistry. The new full-colour text design enhances the presentation of the many molecular structures and 3-D images. Supporting this edition Companion website featuring multiple-choice questions and rotatable 3-D molecular structures, available at "www.reasoned.co.uk/housecroft," For full information, including details of lecturer material, see the Contents list inside the book. A Solutions Manual, written by Catherine E. Housecroft, with detailed solutions to all end-of-chapter problems within the text is available for purchase separately ISBN 0131 39926 8. "Catherine E. Housecroft" is Professor of Chemistry at the University of Basel, Switzerland. She is the author of a number of textbooks and has extensive teaching experience in the UK, Switzerland, South Africa and the USA. "Alan G. Sharpe" is a Fellow of Jesus College, University of Cambridge, UK and has had many years of experience teaching inorganic chemistry to undergraduates

THE HANDY WEATHER ANSWER BOOK**SURVIVAL HANDBOOK FOR THE NEW CHEMISTRY INSTRUCTOR**

Prentice Hall **This book provides an overview of the issues facing new chemistry faculty in preparation for teaching. Serving as a reference to answer specific questions new chemistry faculty encounter, this book is comparable to sitting down with a colleague in the department and talking through some ideas, or gaining some pointers on how to avoid common pitfalls. It is the one single place new chemistry faculty can go to find practical information on how to teach and how to prepare for teaching their first course. Chapters are written both by established experts in the field and by new professors within their first couple of years of teaching.**

PEER-LED TEAM LEARNING**ORGANIC CHEMISTRY**

Prentice Hall **This unique book explains the theory behind peer-led team learning, offers suggestions for successful implementation (including how to write effective group problems and how to train peer leaders), discusses how to evaluate the success of the program, and answers frequently asked questions. It is designed as a workbook, to be used as the central focus of activity in a PLTL Workshop in organic chemistry. It is not a drill book, nor is it a self-contained guided inquiry book. As with the Workshops themselves, this book is intended to be a companion to a textbook in a lecture course. The Workshop problems are challenging, and readers need to prepare for them by studying the book, the lectures, and by working the end-of-chapter problems ahead of Workshop time. Structure: Functional Groups; Structure: Molecular Geometry and Bonding; Structure and Properties; Structure and Properties: Acids and Bases; Reaction Mechanisms; Stereochemistry of Alkanes and Cycloalkanes; Alkenes: Electrophilic Addition Mechanism: Carbocations; Alkenes: Reactions; Free Radical Reactions: Thermochemistry; Organic Synthesis; Chirality; Nucleophilic Substitution Reactions; Elimination Reactions; Alkyl Halides and Alcohols: Synthesis; Epoxides and Ethers; Conjugated Systems; Aromaticity; Aromatic Electrophilic Substitution; Pericyclic Reactions; Aldehydes and Ketones; Enols and Enolate Ions; Ester and β -Dicarbonyl Enolates; Carbohydrates; Phenols; Carboxylic Acids; Carboxylic Acid; Derivatives: Nucleophilic Acyl Substitutions; Lipids; Amines; Amino Acids and Peptides; Metabolism. INTRODUCTION TO GREEN CHEMISTRY, SECOND EDITION

CRC Press In the nearly 10 years since the publication of the bestselling first edition of Introduction to Green Chemistry, interest in green chemistry and clean processes has grown so much that topics, such as fluoros biphasic catalysis, metal organic frameworks, and process intensification, barely mentioned in the first edition, have become major areas of research. In addition, government funding has ramped up the development of fuel cells and biofuels. It reflects the evolving focus from pollution remediation to pollution prevention. Copiously illustrated with over 800 figures, this second edition provides an update from the frontiers of the field. New and expanded research topics: Metal-organic frameworks Solid acids for alkylation of isobutene by butanes Carbon molecular sieves Mixed micro- and mesoporous solids Organocatalysis Process intensification and gas phase enzymatic reactions Hydrogen storage for fuel cells Reactive distillation Catalysts in action on an atomic scale Updated and expanded current events topics: Industry resistance to inherently safer chemistry Nuclear power Removal of mercury from vaccines Removal of mercury and lead from primary explosives Biofuels Uses for surplus glycerol New hard materials to reduce wear Electronic waste Smart growth The book covers traditional green chemistry topics, including catalysis, benign solvents, and alternative feedstocks. It also discusses relevant but less frequently covered topics with chapters such as Chemistry of Longer Wear and Population and the Environment. This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society.

TECHNICAL BOOK REVIEW

CHEMICAL MAGIC FROM THE GROCERY STORE

Kendall Hunt "This book contains sixty activities, many of which can be used by teachers of all grades. Teachers and parents with little or no background in science or chemistry can understand and conduct these activities. Students can do them, too, if supervision is provided. The catchy title of each activity and the 'magic show' approach are meant to capture attention, arouse curiosity, and dispel chemophobia" -- Preface, v.

GENERALIZED STATISTICAL THERMODYNAMICS

THERMODYNAMICS OF PROBABILITY DISTRIBUTIONS AND STOCHASTIC PROCESSES

Springer This book gives the definitive mathematical answer to what thermodynamics really is: a variational calculus applied to probability distributions. Extending Gibbs's notion of ensemble, the Author imagines the ensemble of all possible probability distributions and assigns probabilities to them by selection rules that are fairly general. The calculus of the most probable distribution in the ensemble produces the entire network of mathematical relationships we recognize as thermodynamics. The first part of the book develops the theory for discrete and continuous distributions while the second part applies this thermodynamic calculus to problems in population balance theory and shows how the emergence of a giant component in aggregation, and the shattering transition in fragmentation may be treated as formal phase transitions. While the book is intended as a research monograph, the material is self-contained and the style sufficiently tutorial to be accessible for self-paced study by an advanced graduate student in such fields as physics, chemistry, and engineering.

RODAK'S HEMATOLOGY - E-BOOK

CLINICAL PRINCIPLES AND APPLICATIONS

Elsevier Health Sciences Featuring hundreds of full-color photomicrographs, Rodak's Hematology: Clinical Principles and Applications, 5th Edition prepares you for a job in the clinical lab by exploring the essential aspects of hematology. It shows how to accurately identify cells, simplifies hemostasis and thrombosis concepts, and covers normal hematopoiesis through diseases of erythroid, myeloid, lymphoid, and megakaryocytic origins. This text also makes it easy to understand complementary testing areas such as flow cytometry, cytogenetics, and molecular diagnostics. Clinical lab experts Elaine Keohane, Larry Smith, and Jeanine Walenga also cover key topics such as working in a hematology lab, the parts and functions of the cell, and laboratory testing of blood cells and body fluid cells. Instructions for lab procedures include sources of possible errors along with comments. Case studies in each chapter provide opportunities to apply hematology concepts to real-life scenarios. Hematology instruments are described, compared, and contrasted. UPDATED, full-color illustrations make it easier to visualize hematology concepts and show what you'll encounter in the lab, with images appearing near their mentions in the text so you don't have to flip pages back and forth. Hematology/hemostasis reference ranges are listed on the inside front and back covers for quick reference. A bulleted summary makes it easy to review the important points in every chapter. Learning objectives begin each chapter and indicate what you should achieve, with review questions appearing at the end. A glossary of key terms makes it easy to find and learn definitions. NEW coverage of hematogones in the chapter on pediatric and geriatric hematology helps you identify these cells, a skill that is useful in diagnosing some pediatric leukemias. UPDATED chapter on molecular diagnostics covers new technology and techniques used in the lab.
